[b05173327](#)

Kurunegala, Sri Lanka

PROFILE SUMMARY

Motivated ICT undergraduate with hands-on experience in software development and system-based applications. Strong understanding of application design, authentication systems, and secure system implementation. Actively interested in networking and cybersecurity, with foundational knowledge in secure communication, access control, and system reliability. Seeking opportunities to contribute to software development projects while building long-term expertise in networking and cybersecurity.

EDUCATION

Bachelor of Information and Communication Technology (Hons)

November 2023 – Present

Uva Wellassa University of Sri Lanka

Cumulative GPA: 3.6

GCE Advanced Level (Engineering Technology Stream)

2021

Bandaranayake National School (Ehetuwewa)

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, C, JavaScript, PHP.
- **Frameworks & Libraries:** React.js, Node.js, Tailwind CSS, Bootstrap, Flutter.
- **Databases:** MySQL, SQLite, MongoDB.
- **Backend & DevOps Tools:** REST API, JWT Authentication, AWS (Basic), Docker (Basic).
- **Security:** Secure login flows, Role-based access control, token-based authentication.
- **Tools:** Git, GitHub, Postman, Wireshark.
- **Systems:** Linux(basic).

PROJECTS

Sky kitchen– University Smart food Ordering Platform

Nov 2024 - Jul 2025

Developed a university food ordering and delivery management system for the BTS department, including a web application, admin panel, and mobile delivery app. Focused on secure access control, efficient order management, and real-time delivery coordination. **(React.js, Node.js, MongoDB, Flutter, Tailwind CSS, JWT, Socket.io)**

GitHub: <https://github.com/uwufts22/uwufood-web-backend> | <https://github.com/uwufts22/uwufood-web-frontend> | https://github.com/uwufts22/uwufts22-uwufood-Mobile_App

Boolean Logic Solver Software & Digital Hardware Simulator

Jun 2025 - Sep 2025

Developed a desktop application to simplify Boolean expressions and simulate digital logic circuits, including real hardware-like logic gate behavior. Implemented Boolean simplification techniques, truth table generation, and interactive circuit simulation to support practical learning. **(Electron.js, React.js, Python, SQLite, Arduino)**

GitHub: https://github.com/logicsimplifier/boolean_logic_solver

Harvester Tracking & Field Monitoring System

Ongoing

Developing an IoT-based harvester tracking system to monitor real-time location and operational data of agricultural harvesters. Implemented periodic location updates, data storage, and live visualization to support field tracking, activity monitoring, and operational analysis. Designed the system to handle intermittent network connectivity, ensuring data reliability in rural environments. **(Flutter, Node.js, Firebase, ESP32, A6 GSM, NEO-6M GPS)**

GitHub: https://github.com/IsharaWanninayaka/Rd_agrocare_mobile_application

AI-Powered Financial Fraud Detection System

Ongoing

Developing an AI-driven system to detect and prevent fraudulent financial transactions using machine learning and graph-based analysis. The system analyzes transaction patterns in real time, identifies anomalies, and detects fraud rings through network relationships. Includes an explainable AI module to improve transparency and decision interpretability for analysts. **(Python, React.js, Node.js, PostgreSQL, Scikit-learn)**

GitHub: <https://github.com/deep-scan-ai/ai-powered-fraud-detection>

CERTIFICATIONS & ONLINE LEARNING

Trainee- Full Stack Developer - University of Moratuwa (Online Certification).

Introduction to Software Quality Assurance - University of Moratuwa (Online Certification).

Certified in Cybersecurity (cc) - ISC² (Online Training).

Ethical Hacker - Cisco Networking Academy (Online Certification).

PERSONAL SKILLS

Familiar with the stages of the Software Development Lifecycle, including design, development, and testing.

Basic understanding of common Data Structures and Algorithms.

Understanding and practical experience with Object-Oriented Programming (OOP) concepts and design principles.

Experience in building and consuming RESTful APIs for communication between frontend and backend systems.

Strong problem-solving and analytical skills.

Basic understanding of cloud-based environments such as AWS.
